

```
package com.tnsif.nonaccessmodifiers;

public class StaticDemo {

    //static variable
    static int count;

    //static block
    static {
        count = 20;

        System.out.println("Shows the count value assigned as: "
+ count);
    }

    //static method
    static void show() {
        System.out.println("Shows the static method: "+count );
    }

    public static void main(String[] args) {

        System.out.println("Main method static: "+count);

        //calling a method
        show();

    }

}
```
