

```
package com.tnsif.wrapperclass;

public class WrapperClassDemo {

    public static void main(String[] args) {

        //wrapper class - used to convert primitive data types to
        objects
        //and vice versa

        //autoboxing or boxing
        //unboxing

        int x = 5;

        //autoboxing
        Integer y = Integer.valueOf(x);

        //unboxing
        int z = y;

        System.out.println(y + " " + z);

    }

}
```
